

# IS IT WORTH IT

## THE RISK IS THARE

### vaping is the problem

The current uprise of vaping in students under the age of 18 has skyrocketed by over 50%, raising significant concerns among parents, teachers, and doctors regarding the long-term implications for adolescent health and well-being.

this is not only the bad turn on this instance by vaping in public places this encourages the years below and the years above too causing even more harm to not only human health but the oxygen parentages on the earth though it dose not cause nearly as much harm to the earth as cars and normal cigarettes this is still a big problem.

and to wrap this up in a blanket of filth its shown that it also effects your child's behaviour its show to make them more aggressive and more likely to drink more as an adult this impacts many opportunity's they may of had.
